Pradeep Mahalingam

Manager, Business Solutions

iACCESS solutions branch,

777 Bay Street, Suite 3200,

ON, M5G 2E5

Dear Mr Pradeep,

I am delighted to see the junior programmer position posted on Seneca Works. As an I.T. student myself, I am more than happy to know that I can contribute my skills and knowledge to help the company which is already on its way to a better future.

I am currently a 3rd semester student studying Computer Engineering technology at Seneca College and have been learning web development as a hobby. This allows me to get any practical and hands on assignments that can compliment the skills and knowledge that I have harnessed as well as up-to-date course contents that help me understand better the latest trends in technology. I have gained a strong understanding and practical knowledge of computing devices through PRG355 which is "C and Object Oriented Programming with C++" and IPS255 which is "Interpersonal Skills in the engineering workplace" which is the foundation for my communication skills in a professional environment and I find it to be suitable for the job description as a service desk technician. This job will allow me to learn and grow myself more as a computer engineer and contribute to the company's success.

Thank you in advance for your consideration, and I look forward to discussing the lab assistant position shortly. I can be reached at 437-993-1273 or by email at tenzindala2000@gmail.com.

Sincerely,

Tenzin Dala
